

# Datasheet F-201AI

## Mass Flow Controller for Gases

### > Introduction

High-Tech model F-201AI Mass Flow Controllers (MFCs) are suited for precise control of virtually all conventional process gases. The MFC consists of a thermal mass flow sensor, a precise control valve and a microprocessor based PID controller with signal and fieldbus conversion. As a function of a setpoint value, the flow controller swiftly adjusts the desired flow rate. The IN-FLOW model is of rugged design (IP65) for use in industrial environments or even Zone 2 hazardous areas, with optional ATEX Cat. 3 approval. The mass flow, expressed in normal litres per minute or per hour, is provided as analog signal or digitally via RS232 or fieldbus. The flow range, wetted materials and orifice size for the control valve are determined depending of the type of gas and the process conditions of the application.

### > Technical specifications

#### Measurement / control system

|   |   |
|---|---|
| Accuracy (incl. linearity)<br>(Based on actual calibration) | : $\pm 0,5\%$ Rd plus $\pm 0,1\%$ FS  |
| Turndown  | : 1 : 50 (in digital mode up to 1:187,5)  |
| Multiple fluid capability                                   | : • storage of max. 8 calibration curves<br>• optional Multi Gas / Multi Range functionality up to 10 bar |
| Repeatability   | : $< \pm 0,2\%$ Rd  |
| Settling time (controller)                                  | : 1...2 seconds   |
| Max. Kv-value   | : $6,6 \times 10^{-2}$  |
| Control stability   | : $\leq \pm 0,1\%$ FS   |
| Temperature range   | : -10...+70°C<br>for ATEX cat. 3 max. 50°C  |
| Temperature sensitivity<br>(nominal range)                  | : zero: $< \pm 0,05\%$ FS/°C;<br>span: $< \pm 0,05\%$ Rd/°C   |
| Pressure sensitivity  | : 0,1% Rd/bar typical N <sub>2</sub> ; 0,01% Rd/bar typical H <sub>2</sub>                                |
| Leak integrity (outboard)                                   | : $< 2 \times 10^{-9}$ mbar l/s He  |
| Attitude sensitivity  | : max. error at 90° off horizontal 0,2% FS<br>at 1 bar, typical N <sub>2</sub>                            |
| Warm-up time  | : 30 min. for optimum accuracy<br>2 min. for accuracy $\pm 2\%$ FS  |

#### Mechanical parts

|                              |   |
|------------------------------|---|
| Material (wetted parts)      | : stainless steel 316L or comparable      |
| Pressure rating              | : 64 bar abs                              |
| Process connections          | : compression type or face seal male      |
| Seals                        | : standard : Viton; options: EPDM, Kalrez |
| Ingress protection (housing) | : IP65                                    |

*Although all specifications in this datasheet are believed to be accurate, the right is reserved to make changes without notice or obligation.*

#### IN-FLOW Mass Flow Controller model F-201AI

#### Electrical properties

|                       |   |
|-----------------------|---|
| Power supply          | : +15...24 Vdc $\pm 10\%$   |
| Power consumption     | : max. 320 mA;<br>add 50 mA for Profibus, if applicable   |
| Analog output         | : 0...5 (10) Vdc, min. load impedance $> 2 \text{ k}\Omega$<br>0 (4)...20 mA (sourcing), max. load impedance $< 375 \Omega$ |
| Analog setpoint       | : 0...5 (10) Vdc, min. load impedance $> 100 \text{ k}\Omega$<br>0 (4)...20 mA, load impedance $\sim 250 \Omega$            |
| Digital communication | : standard RS232 ; options: Profibus-DP®, DeviceNet™, Modbus-RTU, FLOW-BUS  |

### > Ranges (based on Air)

| Model       | minimum                      | nominal                      | maximum                       |
|-------------|------------------------------|------------------------------|-------------------------------|
| F-201AI-50K | 0,4...20 l <sub>n</sub> /min | 0,4...50 l <sub>n</sub> /min | 0,4...75 l <sub>n</sub> /min  |
| F-201AI-70K | 0,6...30 l <sub>n</sub> /min | 0,6...70 l <sub>n</sub> /min | 0,6...100 l <sub>n</sub> /min |

## > Model number identification

## > Thermal mass flow measuring principle

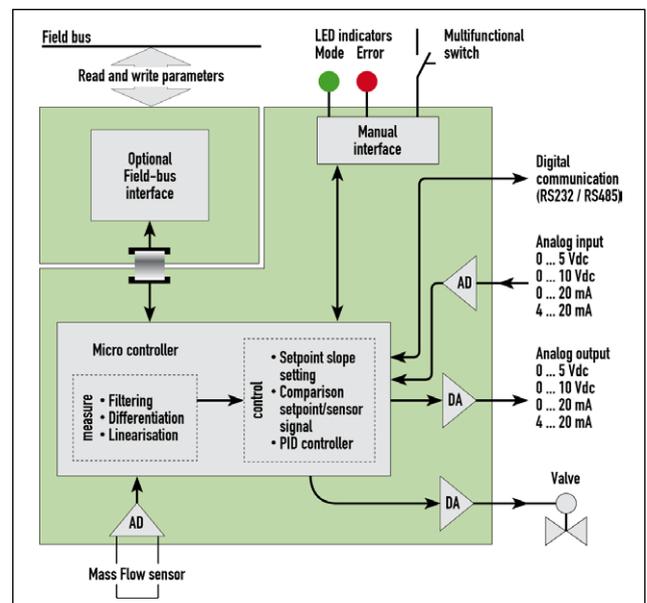

The heart of the thermal mass flow meter/controller is the sensor, that consists of a stainless steel capillary tube with resistance thermometer elements. A part of the gas flows through this bypass sensor, and is warmed up heating elements. Consequently the measured temperatures  $T_1$  and  $T_2$  drift apart. The temperature difference is directly proportional to mass flow through the sensor. In the main channel High-Tech applies a patented laminar flow element consisting of a stack of stainless steel discs with precision-etched flow channels. Thanks to the perfect flow-split the sensor output is proportional to the total mass flow rate.

Functional scheme of the thermal mass flow sensor

## > State of the art digital design

Today's IN-FLOW<sup>®</sup> series are equipped with a digital pc-board, offering high accuracy, excellent temperature stability and fast response (settling times  $t_{98}$  down to 500 msec). The basic digital pc-board contains all of the general functions needed for measurement and control. In addition to the standard RS232 output the instruments also offer analog I/O. Furthermore, an integrated interface board provides DeviceNet<sup>™</sup>, Profibus-DP<sup>®</sup>, Modbus-RTU or FLOW-BUS protocols.
